look after	treat	keep	ache
suffer	examine	cure	operate

#### A Family Doctor

I am a family doctor. I have a nurse to help me and a receptionist to help the patients when they come to see me. When I see my patients in my surgery, first I listen to their problems, then I \_\_\_\_\_ (1) them. Then, if I can, I \_\_\_\_\_ (2) them for their illnesses. Some have just sore throats, headaches or cold and I give them a prescription to take to the chemist. Others \_\_\_\_\_ (3) from serious diseases of the heart, lungs, stomach or even brain. I can't always \_\_\_\_\_ (4) them myself and sometimes I have to send them to hospital for treatment. If something is seriously wrong with them, the hospital will decide to \_\_\_\_\_ (5) on them. The trouble is that people don't \_\_\_\_\_ (6) themselves properly. It really isn't so difficult to \_\_\_\_\_ (7) well. If your head begins to \_\_\_\_\_ (8), have a rest. If you always feel tired, get more exercise. Eat well. Have a good diet. And have a regular check-up with the doctor.

**Task 11. Translate the text from Task 10.**
